

# Energy Policy

Petroleum Air Services (PAS) realizes the importance of incorporating energy efficiency into our daily operations and integrating it in our corporate values. This policy establishes the framework for managing energy consumption within our designated area. In essence, our goal is to reduce energy costs, enhance energy efficiency, reduce CO2 emissions, diminish reliance on fossil fuels, promote the utilization of renewable energy, and increase investments in clean, energy-efficient technologies.

**Our Energy Management System (EnMS) is designed to comply with the requirements of ISO 50001:2018 standard, to achieve this PAS is committed to:**

## **Continual Improvement:**

- Ensuring continual improvement in our energy management system and energy performance across all PAS facilities

## **Objectives and Targets:**

- Setting and reviewing the energy policy, objectives, and targets periodically to ensure the continual improvement in energy performance

## **Legal and Organizational Requirements:**

- Fulfilling all legal and organizational requirements related to energy use.

## **Information and Resources:**

- Guaranteeing the availability of information and necessary resources to achieve objectives and targets, with the aim to enhance energy performance and reduce emissions

## **Procurement and Design:**

- Supporting the procurement and design of energy efficient products, activities, and services.

## **Awareness and Training:**

- Ensuring that employees are aware of their Impact on energy performance, as well as providing necessary training to raise competence of effective personnel regarding improving energy performance

## **Renewable Energy:**

- Promoting the use of renewable energy

## **Communication:**

- Communicating this policy to all employees and interested parties

**" Our commitment is to  
Sustainable  
Energy Practices "**

**Gen. Ehab Ali AbdelMaksoud Abbas**

Accountable Executive and Chairman
